Sample CINAHL Search:

Where can I locate research articles on:

Maternal Attachment AND Theoretical Nursing Models?
Recommended starting article databases for psychosocial nursing topics:
CINAHL, PsycINFO, Web of Science, Natural Standard

• Article databases are linked from:
  http://nyu.libguides.com/content.php?pid=27011&sid=195601

• OR from the library databases page:
  http://arch.library.nyu.edu/  (search by name in box on Right)

• This slide show demonstrates a search in CINAHL (Cumulative Index to Nursing and Allied Health Resources)
  Direct Link:
  http://arch.library.nyu.edu/databases/proxy/ NYU00202

The CINAHL database includes the largest number of journals aimed at a nursing and allied health audience as well as those with articles on the psychosocial aspects of healthcare.
A keyword search in CINAHL suggests a subject heading maternal attachment has mapped to Prenatal Bonding (the preferred term in CINAHL).
Browse initial results for Prenatal Bonding...
Add a second term: nursing models
Nursing models maps to **Nursing Models, Theoretical** (preferred term)

check EXPLODE (to include articles assigned with more specific terms lower in the TREE)

Then click SEARCH DATABASE.
View Search History to combine sets. Check sets to combine and search with AND.
1. **Predictors of maternal sensitivity during the early postpartum period.**
   
   
   Subjects: Mother-Infant Relations; Mothers; Puerperal Period; Adult: 19-44 years; Infant: 1-23 months; Female
   
   Database: CINAHL Plus
   
   Add to folder | Relevancy: 1 | Cited References: 2 | Times Cited in this Database: 2
   
   Check SFX for more information | Check NYU Med Center SFX for full text

2. **Using ecological models in research on health disparities.**
   
   (Includes abstract); Reifflander R; Gallagher M; Forgione J. Journal of Professional Nursing, 2005 Jul-Aug; 21 (4): 216-22 (journal article - tables/charts) ISSN: 0885-7223 PMID: 16051158
   
   Subjects: Conceptual Framework; Ecological Research; Health Services Accessibility; Health Services Research; Health Status; Nursing Models, Theoretical; Research, Nursing; Adolescent
   
   Database: CINAHL Plus
   
   Add to folder | Relevancy: 1 | Times Cited in this Database: 2
   
   Check SFX for more information | Check NYU Med Center SFX for full text

3. **Perceived relationship with the father of the baby and maternal attachment in adolescents.**
   
   
   Subjects: Prenatal Bonding; Maternal Behavior; Adolescent Mothers; Adolescent Fathers; Father-Infant Relations; Adolescent: 13-18 years; Adult: 19-44 years; Male; Female
   
   Database: CINAHL Plus
   
   Add to folder | Relevancy: 1 | Cited References: 22
   
   Check SFX for more information | Check NYU Med Center SFX for full text
Perceived relationship with the father of the baby and maternal attachment in adolescents.

Authors: Bloom KC
Affiliation: Assistant Professor, University of Florida College of Nursing, Jacksonville
Publication Type: journal article - research, tables/charts
Language: English

Major Subjects: Prenatal Bonding — In Adolescence
Material Behavior — In Adolescence
Adolescent Mothers
Adolescent Fathers
Mother-Infant Relations

Minor Subjects: Rubin’s Theory of Maternal Identity, Exploratory Research; Convenience Sample; Instruments, Data Analysis Software; Single Parent; Pearson’s Correlation Coefficient; Factors; Adolescence; Adult; Pregnancy; Male; Female; Human

Abstract: OBJECTIVE: To examine the perceived relationship with the father of the baby using a convenience sample. SETTING: Four antepartum clinics for low-income women, 20-29 weeks gestation; follow-up assessments at 20-29 weeks (n = 64), 30-40 weeks (n = 64). RESULTS: A close and satisfying relationship with the father of the baby was predicted positively by maternal satisfaction and negatively by maternal stress. A close and satisfying relationship with the father of the baby was positively associated with maternal and infant attachment (r = .38, p < .05). CONCLUSIONS: The findings suggest that a close and satisfying relationship with the father of the baby is needed. Fathers of the baby have a significant role in the adolescent's relationship with the father of the baby.
To increase the level of evidence you will want to limit search results to peer-reviewed and/or publication type: “Research”

From the Results page, click on SHOW MORE to view options for Limiting
Select one or more Publication types to limit. You can limit to "Research" to increase the level of evidence.
Perceived relationship with the father of the baby and maternal attachment in adolescents.

Authors: Bloom KC
Affiliation: Assistant Professor, University of Florida College of Nursing, Jacksonville

Publication Type: journal article - research, tables/charts
Language: English

Major Subjects: Prenatal Bonding — In Adolescence
Maternal Behavior — In Adolescence
Adolescent Mothers
Adolescent Fathers
Mother-Infant Relations

Minor Subjects: Rubin's Theory of Maternal Identity; Exploratory Research; Convenience Sample; Instruments; Data Analysis Software; Single Parent; Pearson's Correlation Coefficient; Adolescence; Adult; Pregnancy; Male; Female; Human

Abstract: OBJECTIVE: To examine the perceived relationship with the father of the baby using a convenience sample. SETTING: Four antepartum clinics for low-income clients with 12 to 20 weeks gestation; follow-up assessments at 20–29 weeks (n = 64), 30–40 weeks (n = 33). RESULTS: A close and satisfying relationship with the father of the baby was positively correlated with maternal attachment attachment (r = .38, p < .05) and maternal-infant attachment (r = .38, p < .05). CONCLUSIONS: The findings of this study lend tentative support to Rubin's theory of maternal identity formation. A close and satisfying relationship with the father of the baby has a positive influence on maternal attachment behaviors. Additional research related to the adolescent's relationship with the father of the baby is needed. Fathers of the babies of adolescent mothers should be included, where appropriate, in ongoing care of the mother and infant.
