WORKING BIBLIOGRAPHY FOR QDA LITERATURE OF THE FIELD

The Third Edition of this popular text offers those new to qualitative inquiry a clear and practical guide to the reasons for doing qualitative research, matching questions to appropriate methods, and the tasks necessary for getting started. In their direct and friendly style, Lyn Richards and Janice M. Morse help researchers reflect on why they are working qualitatively and how to choose an appropriate method, and then approach confidently the tasks of research design, data making, coding, analyzing, and, finally, writing up results.

This handbook provides comprehensive coverage of contemporary and developing Internet and online social research methods, spanning both quantitative and qualitative research applications.

The editors have brought together leading names in the field of online research to give a thoroughly up to date commentary on current debates. The chapters cover both methodological and procedural themes, offering readers a sophisticated treatment of the practice and uses of Internet and online research that is grounded in research methodology. Beginning with an examination of the significance of the Internet as a research medium, the book goes on to cover research design, data capture, the survey, virtual ethnography, and the internet as an archival resource, and concludes by looking at potential directions for the future of Internet and online research.

The Handbook of Internet and Online Research Methods will be welcomed by anyone interested in the contemporary practice of computer-mediated research and scholarship. Postgraduates, researchers and methodologists from disciplines across the social sciences will find this an invaluable source of reference.

How can you analyze narratives, interviews, field notes, or focus group data?

Qualitative text analysis is ideal for these types of data and this textbook provides a hands-on introduction to the method and its theoretical underpinnings. It offers step-by-step instructions for implementing the three principal types of qualitative text analysis: thematic, evaluative, and type-building. Special attention is paid to how to present your results and use qualitative data analysis software packages, which are highly recommended for use in combination with
qualitative text analysis since they allow for fast, reliable, and more accurate analysis. The book shows in detail how to use software, from transcribing the verbal data to presenting and visualizing the results.

The book is intended for Masters and Doctoral students across the social sciences and for all researchers concerned with the systematic analysis of texts of any kind.

In *Computer Programs for Qualitative Data Analysis*, Weitzman and Miles . . . provide a critical, in-depth look at 24 separate applications. The authors make an impressive team: Weitzman is a professor of social and organizational psychology with an extensive computer background, and Miles is a social psychologist who is well-known in the field of qualitative research for co-authoring a popular book on qualitative data analysis with A. Michael Huberman. Together, the two researchers have produced an informative, user-friendly sourcebook that can save readers a significant amount of time and money when shopping for a software program for qualitative data analysis.

Do you want to start, extend, or update your use of computer software for qualitative data analysis? If so, this clear and user-friendly guidebook is for you. Without assuming its reader has extensive computer experience, *Computer Programs for Qualitative Data Analysis* takes a critical yet practical look at the wide range of software currently available. It gives detailed reviews of 24 programs in five major categories (text retrievers, text-based managers, code-and-retrieve programs, code-based theory-builders, and conceptual network-builders) and gives ratings of more than 75 features per program. The authors also provide detailed guidance in operating each program. They help you to ask key questions about your computer use—the nature of your project, time line, analyses planned, and the worksheets required—to help you identify the programs best suited to your needs. Up-to-date and practical, *Computer Programs for Qualitative Data Analysis* is an absolute must-have book for any qualitative researcher who uses—or wants to use—computer programs in analyses.

*Using Software in Qualitative Research* is an essential introduction to the practice and principles of Computer Assisted Qualitative Data Analysis (CAQDAS). The book will help you to choose the most appropriate package for your needs and get the most out of the software once you are using it.

This book considers a wide range of tasks and processes in the data management and analysis process, and shows how software can help you at each stage. In the new edition, the authors
present three case studies with different forms of data (text, video and mixed data) and show how each step in the analysis process for each project could be supported by software.

The new edition is accompanied by an extensive companion website with step-by-step instructions produced by the software developers themselves. Software programmes covered in second edition include the latest versions of:

- ATLAS.ti
- DEDOOSE
- HyperRESEARCH
- MAXQDA
- NVivo
- QDA Miner
- TRANSANA

Ann Lewins and Christina Silver are leading experts in the field of CAQDAS and have trained thousands of students and researchers in using software. Reading this book is like having Ann and Christina at your shoulder as you analyze your data.
